Nested Representations for Tabular Data

85.71%

1.	Given a dictionary my_dict and a possible key my_key , which expression below returns the same result as the
	expression my_key in my_dict?
	O my key in my dict items()

1 / 1 point

- my_key in my_dict.items()
- my_key in my_dict.values()
- my_key in my_dict.keys()
- my_dict contains my_key

The keys() method returns a list of keys.

2. We often want to loop over all the key/value pairs in a dictionary. Assume the variable my_dict stores a dictionary. One 1/1 point way of looping like this is as follows:

```
1 for key in my_dict:
2 value = my_dict[key]
3 ...
```

However, there is a better way. We can instead write the following:

```
1 * for key, value in ???:
```

What code should replace the question marks so that the two forms are equivalent?

- my_dict.keys()
- list(my_dict)
- my_dict.values()
- my_dict.items()

3. Consider the following dictionary in Python.

1 / 1 point

```
1 my_dict = {0 : 0, 5 : 10, 10 : 20, 15 : 30, 20 : 40}
```

What is the difference between the expressions $my_dict[25]$ and $my_dict.get(25)$?

- \bigcirc Both expressions raise KeyErrors since 25 is not a valid key in the dictionary.
- \bigcirc Both expressions return the value ${\tt None}$ since 25 is not a valid key in the dictionary.
- $\textcircled{ } \textbf{ The expression} \, \textbf{my_dict[25]} \, \, \textbf{raises a KeyError since} \, \, 25 \, \textbf{is not a valid key while the expression}$ my_dict.get(25) returns None in this case.
- \bigcirc Both expressions return the value 50.

Note that the get () method also takes an optional second parameter that is the returned value if the supplied key is not in the dictionary.

4. Two-dimensional mathematical data structures can be easily represented as a list of lists in Python. A matrix is a rectangular array of items arranged in vertical rows and horizontal columns. The following snippet of Python code generates and prints a list of lists that models a matrix with three rows and five columns.

```
NUM_ROWS = 3
NUM_COLS = 5
3
4 # construct a matrix
5 my_matrix = []
6 * for row in range(NUM_ROWS):
7 new_row = []
```

```
for col in range(NUM_COLS):
    new_row.append(row * col)
my_matrix.append(new_row)
12 # print the matrix
13 * for row in my_matrix:
14 print(row)
```

Mathematically, each entry in a matrix can be indexed by its corresponding row number and column number where these

Which Python expression below returns the value of the entry in the second row and fifth column of the matrix my_matrix?

my_matrix[1][4]

my_matrix[2][5]

my_matrix[4][1]

my_matrix[5][2]

✓ Correct

5. A matrix is square if it has the same number of rows and columns. The diagonal of a square matrix consists of those items in the matrix whose row and column indices are equal. Finally, the <u>trace</u> of a matrix is the sum of the items on the matrix's diagonal.

Write a function trace (matrix) that takes a square matrix matrix and returns the value of its trace. Then use your $implementation of \verb|trace()| and compute the value of \verb|trace(my_matrix)| for instances of \verb|my_matrix|| as defined by$ the code snippet provided in the previous question.

As test, trace(my_matrix) should return 30 when trace(my_matrix) has five rows and columns. Enter in the box below the value returned by $\texttt{trace(my_matrix)}$ when $\texttt{trace(my_matrix)}$ has twenty five rows and columns.

4900 ✓ Correct

6. Dictionaries and lists can also be used in combination to create representations for 2D data in Python. As in the case of lists of lists, individual items in the 2D data structure can be referenced via two indices.

Which of the expressions below are dictionaries of lists (i.e. dictionaries whose values are lists)?

- [{'d': "def", 'e': "efg", 'f': "fgh"}
- [{0:0,1:0,2:0}, {0:0,1:1,2:2}, {0:0,1:2,2:4}]
- {'a': ['a', 'b', 'c'], 'b': ['b', 'c', 'd'], 'c': ['c', 'd', 'e']}

✓ Correct

This expression is a dictionary has values that are a lists of strings.

{0: [], 1: [1], 2: [2, 2], 3: [3, 3, 3]}

✓ Correct

This expression is a dictionary has values that are list of integers.

7. Finally, dictionaries of dictionaries can also be used to represent 2D tabular data such as matrices. The following snippet of Python code generates and prints a dictionary of dictionaries that models a matrix with three rows and five columns.

0 / 1 point

```
1 NUM_ROWS = 3
2 NUM_COLS = 5
              3
# # construct a matrix
5 my_matrix = {}
6 * for row in range(NUM_ROWS):
7 row_dict = {}
8 * for col in range(NUM_COLS):
9 row_dict[col] = row * col
10 my_matrix[row] = row_dict
11
my_matrin,

my_matrin,

my_matrin,

print(my_matrix)

my_matrix

my_matrix

my_matrix

my_matrix[row][c]

my_matrix[row][c]

my_matrix[row][c]

my_matrix[row][c]
```

Note that the same expression my_matrix[row] [col] can be used to reference an entry in the matrix independent of whether the matrix is represented as a list of lists or a dictionary of dictionaries

Which option below corresponds to the value of my_matrix as computed by the snippet above when NUM_ROWS = 5 and NUM_COLS = 9?

this problem. Remember that you can use the equal operator == to compare objects in Python.

- 1 {2: {6: 12, 2: 4, 0: 0, 7: 14, 5: 10, 3: 6, 8: 16, 4: 8, 1: 2}, 4: {0: 0, 3: 12, 2: 8, 6: 24, 4: 16, 5: 20, 8: 32, 7: 28, 1: 4}, 1: {2: 2, 5: 5, 3: 3, 8: 8, 4: 4, 1: 1, 7: 7, 0: 0, 6: 6), 3: {4: 12, 0: 0, 8: 24, 6: 18, 7: 21, 3: 9, 5: 15, 1: 3, 2: 6}, 0: {8: 0, 1: 0, 6: 0, 2: 0, 4: 0, 5: 0, 3: 0, 0: 0, 7: 0}}
- O 1 [[0, 0, 0, 0, 0, 0, 0, 0], [0, 1, 2, 3, 4, 5, 6, 7, 8], [0, 2, 4, 6, 8, 10, 12, 14, 16], [0, 3, 6, 9, 12, 15, 18, 21, 24], [0, 4, 8, 12, 16, 20, 24, 28, 32]]
- (1: {1: 2, 7: 2, 3: 2, 8: 2, 0: 2, 5: 2, 2: 2, 6: 2, 4: 2}, 2: {5: 4, 1: 4, 8: 4}, 0: 4, 3: 4, 2: 4, 4: 4, 7: 4, 6: 4}, 3: {4: 6, 2: 6, 1: 6, 5: 6, 0: 6, 6: 6), 0: {0: 0, 5: 0, 6: 0, 8: 0, 1: 0, 3: 0, 2: 0, 4: 0, 7: 0}, 4: {3: 8, 8: 8, 7: 8, 5: 8, 4: 8, 1: 8, 2: 8, 6: 8, 0: 8}}
- 1 {1: {7: 7, 4: 4, 3: 3, 8: 8, 6: 6, 5: 5, 2: 2, 0: 0, 1: 1}, 0: {0: 0, 7: 0, 3: 0}, 4: 0, 8: 0, 6: 0, 5: 0, 1: 0, 2: 0}, 2: {0: 0, 8: 16, 5: 10, 2: 4, 7: 14, 4: 8, 1: 2, 3: 6, 6: 12}, 3: {1: 3, 7: 21, 2: 6, 8: 24, 3: 9, 4: 12, 6: 18, 0: 0, 5: 18}, 4: (3: 12, 7: 28, 0: 0, 2: 8, 1: 4, 4: 16, 6: 24, 5: 20, 6: 32})

Incorrect

The entries in this dictionary of dictionaries have the wrong values.
